

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Upcoming planning: Need ideas and resources for a Health Fair to be held at the First Congregational Church, Gardner in the fall sponsored by the church Health Ministry. The plan is to have work with a number of groups, {i.e. our MRC unit, the local college}, to have a robust fair reaching out the northern region.

Other meetings- State MRC Leaders meeting— May 2nd Sudbury @ Fire Academy
Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources-don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train- They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA- a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources-don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train- They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA- a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce .

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

- 29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

- 3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

Call 978-928-3834 or wachusettmrc@juno.com

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

MAResponds /CORI checks

On the our website is the application to our unit and also the CORI form. We do have privileges to complete CORIs and the form on our website covers our unit and any use for MAResponds.

Many of you are missing CORI forms or are in need of an updated form. It is recommended that periodically these forms be reviewed and updated.

A very new requirement for CORI forms is that a picture **must** be attached. Your license picture or your Mass ID or other government picture...even as bad as they may be.

The next step is the administrators signature validating that the information is correct—this is my signature. Then I can forward this to MAResponds and if we have a

statewide event, you will be cleared to respond.

An alternative is to have your signature validated by a notary public. And then forward the completed form to me . We must get this process done and we must have pictures for badges.

We have made it a policy not to share information we have in our own database or put it out on the internet. MAResponds has security guards in place and information entered into the database including the CORI acceptance, this information is not shared from MAResponds. You may opt not to have information shared with MAResponds.

Questions? 978-928-3834

Monthly MRC Network Well Check Webinars

Feel free to listen in!!

These monthly interactive webinars are intended to provide MRC units with information on a wide variety of topics. These check-ups will allow us to have an interactive discussion about the wellness of our organization, ways to prevent issues, overcome challenges, and strengthen our network.

The Well Check Webinars are typically held on the first Tuesday of each month at 2:00 pm ET. Please save the future dates on your calendars. They will be about 60 minutes long and primarily focused on a specified topic, with a Q & A period and highlights from the field to be incorporated into most webinars.

Join us for the next MRC Well Check Webinar on Tuesday, February 7, 2017, at 2:00 pm ET. The webinar is titled

"Preparing and Responding to Winter & Spring Disasters."

To join the MRC Network Well Check Webinar online, please follow the steps below:

Visit Well Check Webinar Login Page to join the web conference.

<https://mrc.adobeconnect.com/wcw/>

Select "Enter as a Guest."

Type your name in the box provided and click "Enter Room."

Please note we are using Adobe Connect as a webinar platform. To test your computer for compatibility prior to the meeting, go to https://mrc.adobeconnect.com/common/help/en/support/meeting_test.htm.

Preparedness Summit –Atlanta, Geogia April 25-28

The Newsletter

We've been doing this for 10 years and now for another 10 years...

The past 6 months has been a lull time for the Wachusett MRC. It falls on me as I had to pull away to handle a lot of estate issues from my father's death and as I finished projects at work to move forward to retirement. But it is a new year, with new energy, and interestingly as I reviewed our state of the Wachusett MRC, some of that same review has been going on at the national level of the MRC.

We missed opportunities for training last year and frankly it was just because we didn't have a group of members who could put the time into the planning. Not just my issues but many of our members were having babies, coping with life changing illnesses, and new jobs. But we do need to gather together to add to our skills and knowledge.

There has been a review on the national level of Core Competencies that MRCs are being asked to utilize, that volunteers are being asked to complete and that will allow the MRC program on the local and national level to be more standardized for better collaboration in the face of an emergency.

With that said, I thought that starting a new decade would also be a good reason to review some basics as well as add some new directions. Many of the MRCs have instituted a tier program for volunteers. This has been found to be helpful for MRCs when they are called to help or to work with the community in a public health area. Helps to match the need with the volunteers who have the skill or knowledge .

The tiers or levels of expertise are simple enough.

Level 0-Newly joined or not having any skill in a certain area.

Level 1-Having an awareness of the topic. Example: When we had the training on CBRNE or on some of the issues that a deaf person might have in an emergency.

Level 2- Having hands on skills or knowledge that would be mentoring for others.

Level 3-Extensive level of knowledge and skills that could be used in a leadership role.

The goals are to get as many as possible through level 1 to level 2. One MRC in another state who developed trainings

January to March 2017

Special points of interest:

- We are on Facebook (But don't forget to check the website too!)
- New and Review-pathway for 2017
- CORI changes
-

Training

Knowledge
useful abilities
backbone of co
quired for a tr
oday

and programs to match the competencies found that about 10% at Level 0, 50% at level 1, and 20% each at levels 2 and 3 is a good balance for an MRC that provided good skills for response and outreach into the community.

So now the question is how to achieve that? These competencies are not new, what is new is the detail to assist each MRC unit to have as many volunteers as possible aware and knowledgeable to assist with some level of confidence. I have posted the competencies on the website wachusettmrc.org under the newsletters tab and on the application page, and also have put a link on our facebook page—Wachusett Medical-Reserve Corps.

Starting in February, we will be having meetings to review one of these competencies. The plan is to offer one every 6 weeks. To meet contact hour criteria, each training will be 50 minutes. We will look for venues as we have done in the past in different areas of our geographical coverage.

We have tapped into local talent in the past and I would like to tap deeper into our MRC for those that could share their knowledge on a specific topic. As we move through the competencies, if this is the field you work in or have worked in or have personal experience and know of some great resources—don't be shy, speak up!! Together we will make this MRC stronger and more sustainable when such knowledge and resources are shared.

What is being asked of you? First our bylaws do state that each volunteer should attend at least one training per year. Most MRCs require attendance at two trainings. Please mark your calendars as dates and places are set. Make a point to come and join us one evening.

Work 3-11 pm or 11-7 am or schedule so crowded at this time in your life? Or just prefer online learning? Check out the MRC-Train online which is the national website for a number of trainings MRC offers with CEUs for those that need them. Send a copy of the certificate to us. Why? Well, you get credit for the time you put into the training with a big thank you from me and our unit has a tally of how many have what level of knowledge in what area. We have reports due each quarter for the state and the national organization. We could do a better job reporting this information.

Let's start easy. Goal is to have a minimum of 3 days worth of supplies in the home for those 'just in case moments'. Check out MRC-Train— They have done a good job making it easy to pick up trainings, print and save certificates. You can follow suggested courses from the MRC competencies or supplement your career work or explore a whole new learning pathway.

Check out FEMA— a link is provided on our website. The program IS 909 is a good place to start. Lots of ideas to help get your family prepared for emergencies and lots of ideas to share with your neighbors and organizations of all kinds that you may be part of through your personal choice like church or through your children like Scouts. Check out Ready.gov as well. This is a great site for lists and children's activities. Remember first you take care of your family, then take care of your neighbors, and then care for the larger community.

Next steps are to build on what we are reviewing and add new trainings. Public Health is becoming a bigger piece of MRC programs. February is Heart Month and March is Nutrition month. April is Public Health week the first week. Onward and Forward!!

MRC-TRAIN is a national learning network that provides thousands of quality training opportunities to more than one million professionals who protect and improve the public's health.

Powered by the Public Health Foundation (PHF), the TRAIN Learning Network brings together agencies and organizations in the public health, healthcare, and preparedness sectors to disseminate, track, and share trainings for the health workforce on a single national online learning management system (LMS) platform. This platform was built by and for the health workforce.

The TRAIN Learning Network is

comprised of the following three major components:

-29 TRAIN affiliate agencies, including 26 state health and preparedness agencies

-3 federal agencies — the Centers for Disease Control and Prevention (CDC), Medical Reserve Corps (MRC), and Veterans Health Administration (VHA).

These agencies work together to coordinate and share workforce trainings and operate branded portals on the TRAIN LMS platform.

TRAIN Course Providers: Government agencies, academic institutions, professional associations, non-profits, and other institutions post content to TRAIN. The PHF TRAIN team, as

well as TRAIN affiliate agencies, work closely with these course providers to build a catalog of thousands of online courses and other training content that is openly available to learners through TRAIN. More than 97% of these trainings are free. Many offer CEUs and are aligned with the Core Competencies for Public Health Professionals as well as other nationally recognized standards.

Anyone can register as a learner on TRAIN at no cost. In 2015 alone, TRAIN learners completed more than 820,000 courses. More than 80% of learner course registrations resulted in course completions.

Did you know that April 3-7 is Public Health Week? Looking for a theme to share with your church, the scout troop or other organization? A great first source is Healthline.com

Wanted: Resources

Have you had contact with a person, program or agency that has a lot of positives to give to families? We want to know about it then!

Always looking for ideas, resources and programs we can share with our MRC membership and with other

MRC units. Have you seen a resource written or from a presenter? We want to know about it then!

Have you seen or heard of a great Public Health community program? Do you have some health fair ideas? Do you have some activity ideas to teach children

good health habits? We want to know about them!

Find something interesting but not sure if the MRC can do it.? We want to know about it! Every idea has -worth!

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.

National News: Dec. '16

Disaster Training in Charlottesville Aims to Improve Adaptive Care

Dawn Brantley

CHARLOTTESVILLE, Va. (WVIR) -

The Thomas Jefferson Medical Reserve Corps is making sure people with disabilities will not have to worry about having adaptive care.

Nursing students, personal care assistants, registered nurses, and others with a medical background volunteered their time Saturday to further their emergency response training. They came together to learn how to care for those people if they need to be sheltered during a disaster.

In the event of an evacuation emergency - like flooding, fires, or hurricanes - emergency responders want to make sure everyone can be cared for in a shelter with dignity.

"The Americans with Disabilities Act applies to all state and local governments, and it requires equal access to emergency services and programs," explained Virginia Department of Emergency Management Sheltering Coordinator Dawn Brantley.

The volunteers took time to learn to care for those who have what healthcare professionals call "functional needs access care." That can be anyone who has either a language barrier, or physical disability.

"Say you have a disability or you have limited English proficiency, you are still entitled to the same services that anybody else in the general public would receive in a disaster. That's a basic civil right," said Christopher Rini with the Medical Reserve Corps

There are approximately 18,000 people in the Thomas Jefferson Health Dis-

trict who would need special care in an emergency shelter.

Northern NH Preparedness Conference

Aiming to foster resiliency throughout the community before, during, and after emergency scenarios, the North Country Health Consortium hosted the first Northern NH Preparedness Conference on Nov. 4 at the Town & Country Inn and Resort in Shelburne.

This three-part workshop covered a spectrum of vital activities across preparedness, response, and recovery. Participants came away from the event with the key understanding that preparing and responding to emergency scenarios begins long before disaster strikes.

"After all, everyone becomes an emergency responder in their own right when faced with dire circumstances, and the ability to effectively respond begins first with awareness." said Amy Jeroy, Public Health Director North Country Health Consortium, based in Littleton.

Kicking off the half-day workshop, participants learned an array of planning considerations and practical steps to adopt, as individuals, families, and employers, in order to stay safe and mitigate the effects from manmade and natural disasters. Emphasizing the pivotal roles of situational awareness and mental planning, the Civilian Response to Active Shooter Events (CRASE) course that followed in the lineup outlined strategies and a proven plan for citizens to protect themselves and reduce dangers during live shooter scenarios.

Capping off the event, participants engaged in a guided discussion on post-disaster recovery, and how individuals and organizations can come together to leverage their communities in order to maximize available resources, including hope.
